

IAASSE Content Studio

Handover Guide

1. Overview

IAASSE Content Studio is a web-based AI content generation tool for the IAASSE communications/social media team. It helps turn a short content brief into a draft caption, hashtags, and content angles. The generated content should be reviewed by a human before publication.

2. Access the Tool

Open the published IAASSE Content Studio using the project's live Replit URL. The tool is designed to be accessed through a web browser. If the application does not load, refresh the page and check the internet connection.

3. How to Generate Content

Step	Instruction
1	Open the IAASSE Content Studio.
2	In "What are you sharing?", enter a short description of the announcement, idea, event, or story.
3	Select the target platform: LinkedIn, Instagram, X/Twitter, or Facebook.
4	Select the content type: Announcement, Thought leadership, Event invitation, or Impact story.
5	Select the desired tone: Informed & warm, Clear & direct, Reflective, or Energising.
6	Click "Generate content".
7	Review the generated caption, hashtags, and three content angles.
8	Copy the parts you want to use and make any necessary editorial changes before publishing.

4. Writing Better Briefs

- State the main thing you want the audience to know.
- Include important details such as the audience, purpose, event, opportunity, or key benefit.
- Keep the brief specific enough for the AI to understand the intended message.
- Do not expect the AI to know missing dates, links, speaker names, registration details, or other facts.

5. Choosing the Settings

Setting	Use it for
LinkedIn	Professional, career, academic, and thought-leadership communication.
Instagram	Short, engaging social content and visual-first ideas.
X/Twitter	Concise, direct, conversation-oriented communication.
Facebook	Accessible, community-oriented announcements and stories.

Announcement	Sharing news, opportunities, launches, or updates.
Thought leadership	Ideas, perspectives, insights, and educational discussions.
Event invitation	Promoting an event, session, workshop, or gathering.
Impact story	Showing outcomes, experiences, or meaningful results.

6. Review Before Publishing

- Check names, dates, links, event details, and factual claims.
- Make sure the tone is appropriate for IAASSE and the target audience.
- Remove or edit anything that sounds repetitive, generic, or inaccurate.
- Check hashtags for relevance and remove unnecessary ones.
- Do not publish AI-generated content without appropriate human review.

7. Troubleshooting

Problem	Action
Page does not load	Refresh the page and check the internet connection.
Generation fails	Check that a brief is entered and all required selections are made, then try again.
Output is not suitable	Make the brief more specific and regenerate; review and edit the result before publishing.
Output contains incorrect information	Do not publish it. Correct the information manually and regenerate if necessary.

8. Recommended Workflow

Brief → Select platform → Select content type → Select tone → Generate → Review → Edit → Approve → Publish.

9. Handover Notes

The tool is intended to support the communications workflow rather than replace editorial judgment. The IAASSE team should continue reviewing generated content for accuracy, brand fit, relevance, and current information. Prompt documentation should be kept with the project so future maintainers understand how the generator is instructed.
