

IAASSE Content Studio

User Testing Feedback Report

1. Project Overview

IAASSE Content Studio is an AI-powered internal content generation tool designed to help the IAASSE communications/social media team create platform-specific social content. Users provide a short brief and select a platform, content type, and tone. The tool then generates a caption, hashtags, and content angles for further review.

2. Testing Objective

The purpose of user testing was to check whether the prototype was easy to use, whether the generated content was useful, and whether the output matched the selected platform, content type, and tone. Testing also measured overall satisfaction and users' willingness to use the tool again.

3. Test Participants and Coverage

A total of 5 users tested the published prototype and completed the feedback form. Testing covered all four available platforms: LinkedIn, Instagram, Facebook, and X/Twitter.

Platform	Responses	Share
LinkedIn	2	40%
Instagram	1	20%
Facebook	1	20%
X/Twitter	1	20%

4. Testing Results

Measure	Result
Ease of use	60% Very easy; 20% Easy; 20% Neutral; 0% Difficult
Content usefulness	20% Very useful; 40% Useful; 40% Neutral; 0% Not useful
Platform/content/tone match	60% Yes; 40% Mostly; 0% No
Overall rating	60% rated 5/5; 20% rated 4/5; 20% rated 3/5
Would use again	60% Yes; 40% Maybe; 0% No

5. Key Findings

- **Ease of use:** 80% of testers rated the tool either very easy or easy to use, indicating that the basic workflow is straightforward.
- **Usefulness:** 60% rated the generated content as useful or very useful. The remaining 40% selected neutral, suggesting that relevance and specificity can still be improved.
- **Output alignment:** 60% said the generated content matched their selected platform, content type, and tone, while 40% said it mostly matched.

- **User satisfaction:** 60% gave the tool the highest 5-star rating, while another 20% gave it 4 stars.
- **Future use:** 60% said they would use the tool again and 40% selected maybe, with no tester selecting no.

6. Improvement Opportunities

The testing results show that the prototype is functional and easy to use, but the generated content can be made more precise and natural. Future refinement should focus on improving the prompt so that the user's brief is integrated naturally instead of being repeated awkwardly. The generator should also make stronger distinctions between platforms, content types, and tones so that outputs feel more native to each selected format.

7. Conclusion

The user testing confirms that IAASSE Content Studio provides a usable foundation for an AI-assisted social media content workflow. Across 5 testers, the majority found the tool easy to use, useful, well aligned with their selections, and worth using again. The feedback also identified clear areas for refinement, particularly content relevance and consistency. The prototype is therefore suitable for continued refinement and handover as an internal content-generation tool.

8. Evidence

Google Forms was used to collect the 5 tester responses. The response summary charts provide evidence for the results reported above and can be attached to this report or included as screenshots in the final IAASSE submission.
